

Quality Controller & Welding m/f

Industrial solutions supplier,
conveyors, vibrating feeders, dryers,...

Reference EC729c

THE COMPANY

Based in Walloon Brabant, but operating in an international context, the company specializes in the manufacture, sale and installation of conveyors and feeding systems. It also produces vibrating screens, dryers and fluidized bed coolers, but also vibrating spiral elevators with functions for separating, drying, cooling, mixing and performing various functions related to process and material treatment.

The company offers a wide experience developing customized solutions for material processing. The company prides herself on surpassing customer expectations in performance and service. She is ready to work with specific requirements.

The company is ISO-9001 certified and attaches great importance to the quality of its service with a customer-oriented vision.

THE POSITION

Control quality of all incoming and outgoing goods. Reduce to a minimum quality issues and related cost with our parts, fabricated parts, auxiliaries and machines. Increase customer satisfaction.

Very frequent presence in workshops and at suppliers (mostly in Belgium).

The Quality Controller reports to The Quality Manager.

Responsibilities:

- Establish with the Quality Manager validation forms and procedures for new suppliers (workshops included).
- Keep validated suppliers up to date.
- Assist in validating potential new suppliers.
- Keep up to date with quality legislation, guidelines and norms as well as with technological developments.

Job description:

- Work closely together with the Customer Service Manager to understand which critical quality aspect have to be controlled for incoming parts and outgoing fabricated parts.
- Work closely together with the Design Engineering Manager and the Project Engineer to understand which critical quality aspects have to be controlled for incoming auxiliaries and outgoing fabricated equipment.
- Fabricated parts and equipment have to be typically controlled on dimensions, steel quality, appropriate choice of welding consumables and shielding gases, weld preparations, weld quality, eventual passivation, surface finish, sharp edges, eventual PTFE coating, paint job. References are production drawings and design procedures.
- Determine which measuring instruments are to be used and keep their calibration up to date.
- Establish reports and follow-up on correct handling of Non-Conformities in line with ISO9001 procedures.
- Control on implementation of elementary security guidelines at the workshops, in the warehouse and at suppliers.
- Motivate, stimulate and explain workers in external workshops importance and impact of executing fabricated parts and equipment at the correct and desired quality level.
- Establish with the Quality Manager procedures to improve the quality.
- Assist to quality audits during production of equipment by external inspectors.
- Assist to Factory Acceptance Tests with the Project Engineer and/or the customer.
